

R.M. of Longlaketon No. 219

April 17, 2024

Dear Ratepayer:

Re: Dust Control

The R.M. of Longlaketon No. 219 will be offering dust control services again for 2024. The dust control is to be provided at a suitable time to maximize the effectiveness of the application for the summer season.

Ratepayers will be responsible for 100% of the cost of product used; typically for a 150-meter stretch, approximately 2,250 litres of product is required. The company we currently use charges \$0.415 per litre, therefore the cost would be roughly \$935.00. Please keep in mind that if you require a longer distance or live along a main grid road which is wider then more dust control will be applied.

We require signed authorization from you to apply the dust control product. Please complete, sign and return this form by May 5th, 2024 in order to receive dust control and our maintenance crew will be in contact with you to stake and prep the area.

Sincerely,

Courtney Huber
Administrator

I, _____ of _____
(name of ratepayer) *(mailing address)*

authorize the R.M. of Longlaketon No. 219 to apply dust control adjacent to my yard site being

(legal land description of yard site)

I acknowledge and agree to pay 100% of the cost of product used. I also agree that the municipality may have to grade the road when they deem it necessary.

Dust Control

The R.M. of Longlaketon No. 219 will provide dust control to yard sites at the request of the landowner as follows:

- Landowner must request to council each year, prior to May 5th for dust control and sign an authorization form.

- Land owner will be charged 100% of the cost of the dust control product used.

- RM will prepare road for application and stake distance.

- Landowners with tax arrears are not eligible for dust control program.

- Landowners must agree that if road conditions warrant, the municipality can grade the road when the municipality deems necessary.

****Please note that if it is a dry year with very little moisture, the dust control will not last very long as it requires moisture to keep it activated.**
